Rotary Joints

Solutions for safe transfer of fluids

MP series

Multi-passage joint type MP

- Design with radial shaft seal with elastic contact. Seal design to be selected according required media and performance.
- Housing and rotor material is depending of the application data.
  For example the rotor can be of carbon or stainless steel, while the housing can be of brass, aluminium, carbon or stainless steel.
  The rotor sealing areas are coated with metal ceramics.
- Threaded connections are G/BSP (ISO 228). Other threads such as NPT (ANSI) are available on request.
- Ball bearings lubricated for lifetime.
- Flange of the rotor can be custom-made on request.
- One or two threaded holes in the housing are provided for anti-rotation device.
- For multi-media applications double seals and drain holes are provided to prevent cross contamination of fluids.
- By means of many possible variations of sizes, materials and seals MP series covers a wide scope of applications. MP rotary joints can be combined with a slip ring or another rotary joint or with hollow shaft rotary joints or can be designed with multi-ports at the housing, just to give examples of various possibilities.

MP multi-passage joints are suitable to transfer:

- Hydraulic oil
- Water
- Air
- Gas
- Vacuum

→ *Dimensions on pages 4 and 5*

Combijoint type MPE

MP rotary joint with two or four passages and slip ring with gold/gold contacts.

→ *Page 6*

Hollow shaft type MPH

Simplest version of series MP with 1, 2 or more passages and hollow shaft. The radial connection at the housing corresponds to the customer's shaft passage. The technical characteristics are the same like series MP. Multi-passage versions are available on request.

→ *Page 7*

Type MPT

2 passages with 2 mechanical seals. Transfer of 1 fluid in and out, suitable for higher speed by means of mechanical seal. Custom made design on request.

→ *Page 8*

Type MPV

1, 2, 3, 4 (or more) passages design with gap seal bushes – "hydrostatic relief" to transfer the medium at high speed and high pressure simultaneously. Gap seals create "controlled leakage" recirculated without pressure to the oil hydraulic power unit tank. With this technology it is possible to transfer the medium at high speed and high pressure simultaneously. Types MPA and MPW are suitable for air and water.

→ *Pages 9 - 10 - 11*

For further information as well as notes on safety refer to our operating instructions at *www.maier-heidenheim.de*
Please get in touch with the factory for "user name" and "password".

Application data

Series:	MP - MPE - MPH	MPT	MPV MPA - MPW
Pressure PN max bar*:	Hydraulic Oil: 250 Gas, Air, Water: 10	Hydraulic Oil: 10 Water: 10	Hydraulic Oil: 350 Air, Water: 10

D Rotor in stainless steel, housing in carbon steel
E Rotor in carbon steel, housing in aluminium
G Rotor and housing in carbon steel

Consecutive number for special designs, numbering by factory

** More passages on request

Characteristics

Type **MP** is equipped with radial shaft seals for elastic contact. One or several media can be transferred contemporaneously through 2 to 10 passages. The sealing elements tighten the radial transfer between housing and rotor. The product is available according to catalog dimensions or on request with custom made flanges and/or axial hole for electric cables, axial inlets and/or radial outlets, drains between different media.
Type MP can be used for individual combinations on request.
The dimensions for 2 to 10 passages shown in the table as standard design are a first indication of the technical potential of this type.
Housing design with radial connections G/BSP (ISO 228).

Application Data

Pressure PN max:	**250 bar*** for Hydraulic Oil **10 bar** for Gas, Air, Water
Speed max:	**200 min⁻¹***
Temperature max:	**80°C**
Filtration ratio:	**50 µm**

** Avoid combination of maximum values. For correct selection get in contact with the factory.*

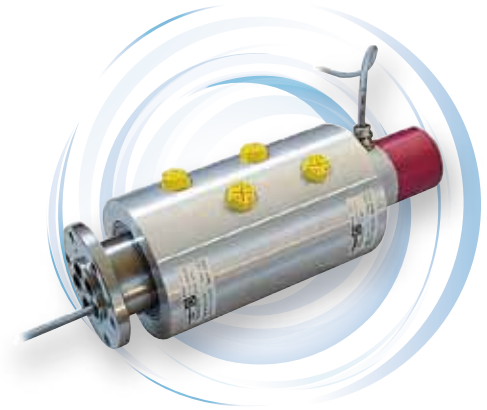
MP1006-MP1010-MP1015-MP0820-MP1020-MP0625-MP0825-MP1025: dimensions on request.
Subject to technical change without notice.



Characteristics

Type **MPE** is a multi-passage rotary joint called Combijoint with 2 or 4 passages including a slip ring with gold/gold contacts for 6/12/18 poles. The slip ring can transfer power, signals, digital data, field bus. Standard protection is IP 64. The fluid transfer can be realised with type MP02 or MP04 and is suitable for hydraulic oil, water, gas or air and with central bore for electric cables.
Housing design with radial connections G/BSP (ISO 228).

Application data

Pressure PN max:	**250 bar*** for Hydraulic Oil **10 bar** for Gas, Air, Water
Speed max:	**200 min^{-1}***
Temperature max:	**80°C**
Filtration ratio:	**50 µm**
Voltage:	**mV – 500V**
Current:	**mA – 24A**

** Avoid combination of maximum values. For correct selection get in contact with the factory.*

Characteristics

Type **MPH** is designed as hollow shaft rotary joint, suitable for an over-the-shaft mounting or shaft ends. The radial seals operate on a shaft sleeve. Sealing technology uses radial seal elements, which can be exchanged if worn.
Also available for more than 1 passage.
Housing design with radial connections G/BSP (ISO 228).

Characteristics

Type **MPT** is a 2 passages design to transfer water or air or hydraulic oil at low pressure but at higher speed, only 1 medium. Different media could mix up in case of leakage. Seal design with mechanical seals, therefore suitable for higher speed Material for rotor and housing depending on medium. Housing design with radial connections G/BSP (ISO 228). Axial housing connection on request.
Rotor design with fixed flange or for K-flange and inner rings.

Application data

Pressure max:	10 bar*
Special version:	25 bar
Speed max:	1,000 min^{-1}*
Temperature max:	80°C
Filtration ratio:	50 µm

* *Avoid combination of maximum values. For correct selection get in contact with the factory.*

Characteristics

Type **MPV** is a 1 to 4 passages (or more) design to transfer hydraulic oil at high speed and high pressure simultaneously. Design is made with gap seal bushes – "hydrostatic relief". Gap seals create controlled leakage, predictable and remaining within acceptable limits recirculated without pressure to the hydraulic oil power unit tank.
Housing in carbon steel or aluminium, rotor in carbon steel. Stainless steel upon request. Rotor design with fixed flange or male thread right-hand or left-hand in G/BSP (ISO 228). Housing design with radial connections G/BSP (ISO 228).

Application Data

Pressure PN max: → 250 bar
Pressure PN min: → 3 bar
Speed max: → 10.000 min^{-1}
Temperature max: → 80 °C
Filtration ratio: → 15 µm

For correct selection get in contact with the factory.

Subject to technical change without notice.

Characteristics

Type **MPW** with 1 or 4 passages or more is suitable to transfer water at high speed and moderate pressure simultaneously. Design is made with gap seal bushes-"hydrostatic relief". Gap seals create controlled leakage. Rotor design with flange or male thread right or left hand in G/BSP (ISO 228). Housing design with radial connections G/BSP (ISO 228).

Application data

Pressure PN max:	15 bar
Pressure PN min:	3 bar
Speed max:	5,000 min^{-1}
Temperature max:	80°C
Filtration ratio:	20 µm

For correct selection get in contact with the factory.

MACHINE TOOLS

Characteristics

Multipassage joint with 5 passages type **Combijoint** consisting of:

- Rotary joint type **MPV** with 4 passages for Oil
- Rotary joint type **KLT** with 1 passage for coolant

Application data

Media: **Hydraulic oil, coolant**

Pressure:	200 bar (hydraulic oil) 70 bar (coolant)
Speed:	2500 min^{-1}
Temperature:	40° C
Filtration ratio:	20 µm

METAL WORKING MACHINES

Characteristics

Application on a laser machine for tubes cutting

Multipassage joint with 5 passages type **Combijoint** consisting of:

- Rotary joint type **MPH** with 5 passages
- Sip ring type **SRK 150**/22 poles with gold/gold contacts

Application data

Media: **Water; air; nitrogen and inert gas**

Pressure:	5 bar (water) 2 bar (air) 12 bar (nitrogen) 25 bar (inert gas)
Speed':	120 min^{-1}
Temperature:	40° C
Filtration ratio:	50 µm
Slip ring:	22 poles for power, signals, probes, encoder

AUTOMATION

Characteristics

Application on a rotating table
Multipassage joint type MP with 12 passages

- Housing in brass
- Rotor in stainless steel
- Outlet rotor for encoder

Application data

Medium: **Compressed air**

Pression:	7 bar
Speed:	7,5 min^{-1} max
Temperature:	20° C
Filtration ratio:	50 µm

DRILLING

Characteristics

Application on a drilling machine for clamping/unclamping pipes
Multipassage joint type Combijoint consisting of:

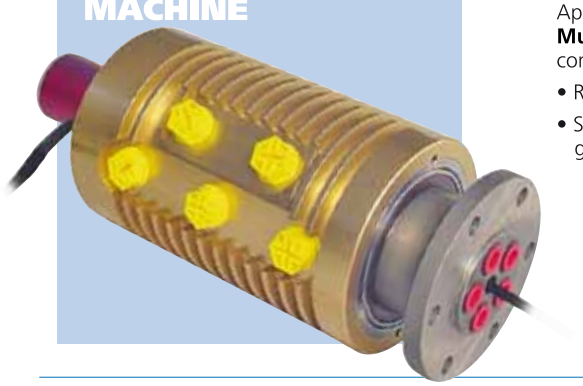
- Rotary joint type **MP** with 5 passages
- Slip ring type **SRK 80**/10 poles with gold/gold contacts

Application data

Medium: **Hydraulic oil**

Pressure:	250 bar
Speed:	6 min^{-1} max
Temperature:	– 20°... 40° C
Filtration ratio:	50 µm

CONVERTING MACHINE



Characteristics

Application on a tissue machine
Multipassage joint type Combijoint consisting of:

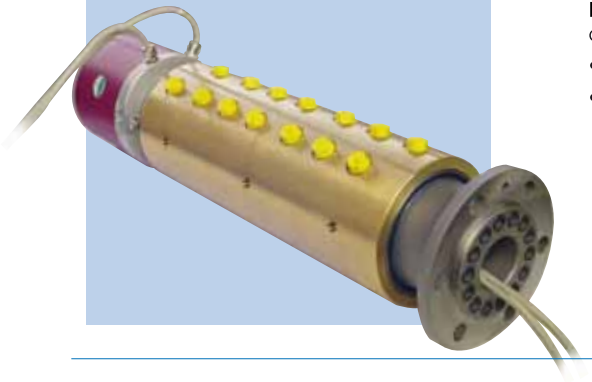
- Rotary joint type **MP** with 5 passages
- Slip ring type **SRK 40**/6 poles with gold/gold contacts

Application data

Medium: **Compressed air**

Pressure:	7 bar
Speed:	270 min^{-1} max
Temperature:	20° C
Filtration ratio:	50 µm
Slip ring:	6 poles for signals

INJECTION MOULDING MACHINES



Characteristics

Application on a rotating table
Multipassage joint type Combijoint consisting of:

- Rotary joint type **MP** with 14 passages
- Slip ring type **SRK 150**/18 poles gold/gold contacts

Application data

Media: **Water, hydraulic oil, air**

Pressure:	5 bar (air) 140 bar (hydraulic oil) 12 bar (water)
Speed:	10 min^{-1}
Temperature:	40° C
Filtration ratio:	50 µm
Slip ring:	18 poles for power, signals, encoder

WIND AND HYDRAULIC TURBINES

Characteristics

- Application on a 15 MW wind turbine for the blades pitch control
- **Multipassage joint type MPV** with 3 passages for hydraulic oil
- Arrangement for slip ring assembly and electrical cables passage

Application data

Medium: **Hydraulic oil**

Pressure:	350 / 10 bar
Speed:	50 min^{-1}
Temperature:	-10° ... 70° C
Filtration ratio:	15 µm

METAL WORKING MACHINES

Characteristics

Application on mandrels for metal coiling

- **Rotary joint type MPV** with 2 passages for hydraulic oil. Possibility to combine it with a rotary joint for grease

Application data

Medium: **Hydraulic oil**

Pressure:	270 bar
Speed:	570 min^{-1}
Temperature:	40° C
Filtration ratio:	15 µm

Special versions and Combijoint

The Combijoint version is the ultimative answer for the designer. With our experience we use the suitable seal and material for your application, we add to this innovative idea, slip rings to transfer electric power, signals and data. Each Combijoint is made according your request.

Fields of applications for the MP and its variants:

- Rotating tables
- Injection moulding machines for plastics with rotating table
- Automation
- Machine tools
- Tanning machines
- Glass machines
- Steel plants
- Machines for food industry
- Filling and labelling machines
- Mixers
- Coiling systems
- Robotics
- Centrifuges separators solid / liquid
- Rotating filters
- Off-shore
- Cryogenic applications
- Radar
- Tunnel machines

Advantages using Combijoint:

- Complete separation of the circuits having different media
- Customized design
- Easy access for service on the joint
- Different materials according specification
- Extended lifetime
- Simplified maintenance

Inquiry form

Company _____ Name _____

Street _____

Postal Code _____ City _____ Country _____

Phone _____ Fax _____ E-mail _____

Technical data

Application* _____

Number of passages** _____ Nominal Diameter** _____

Medium / Media _____

Pressure / s _____ Flow rate / s _____

Temperature / s _____ Speed _____

In case of angular movements, please specify:

Rotating angle _____

Accomplished which speed _____

Is the rotation in the same direction Yes ☐ or returns back - Yes ☐

Axial bore request? Yes ☐ Bore diameter _____ No ☐

Mounting: Horizontal ☐ Vertical (Flange facing down) ☐ Vertical (Flange facing up) ☐

* *If possible, please enclose drawing of the application.* ** *Specify if different sizes.*

Technical Data for slip ring selection

Total No. of poles: _____ Voltage max (V) _____ Current max (A) _____

Type of transmission:

Power ☐ No. of poles:____ Voltage max (V) _____ Current max (A) _____

Signals ☐ No. of poles:____ Voltage max (V) _____ Current max (A) _____

Control ☐ No. of poles:____ Type _____

Digital Data ☐ No. of poles:____ Type _____

Speed: _____

Mounting: Flange ☐

Shaft plug-in ☐

Special connectors required: Yes ☐ No ☐

(If yes, please specify) _____

Protection: IP _____

Quantity: _____

Date: _____
